
460 TEMPORARY PAVEMENT MARKINGS

For the purposes of this section of the PGP, Temporary Pavement Markings are Water Based Pavement Marking Paint, Temporary Retroreflective Raised Pavement Markers / Chip Seal Markers, Temporary Pavement Marking Tape, or interim pavement markings as approved by the Engineer, installed before the permanent pavement markings.

Temporary Retroreflective Raised Pavement Markers / Chip Seal Markers, if used, are placed immediately after the pavement placement operations are completed, or immediately after the chip seal or fog coat placement is completed. These markings are used for a maximum of 7 calendar days from their initial installation and installed according to the MUTCD, ADOT standards and specifications, and project plans. After the expiration of the maximum duration, these markers are replaced by either Temporary Pavement Markings or permanent Pavement Markings, based on the project plans or the Engineer.

The Engineer may consider the installation of W8-12 “No Center Stripe” signs at the beginning of and along the construction zone at 2 mile spacings.

Except on Rubberized Asphalt Pavements, if used, Temporary Pavement Marking Paint or Tape, are used for a maximum of 21 calendar days from their initial installation and are installed according to the MUTCD, ADOT standards and specifications, and project plans.

On Rubberized Asphalt Pavements, the permanent pavement markings are not installed sooner than 30 calendar days after the placement of the final pavement surface, or as otherwise specified by the project plans or the Engineer, and no later than 90 calendar days or as otherwise specified by the project plans or the Engineer. Temporary Pavement Markings are to be maintained for the duration of their use.

The durations stated in this section can be changed only by approval of the Engineer based on project circumstances.
